

**PERMISSION TO RELEASE INFORMATION**  
**Student Information**

The Research Experiences for Undergraduates program at the National Science Foundation (NSF) requires all grantee institutions to submit annual program reports and a more comprehensive final report. One section of the report requests specific data on students participating in any NSF-supported undergraduate research program during the granting period April 1, 2004, through March 31, 2007.

The data requested includes the name and social security number, date of birth, ethnicity, and gender of each participating student. This information is of vital importance in tracking the development of future scientists, science teachers, health sciences workers, and others. We request your permission to obtain this information about you and to pass it along to NSF as necessary. By signing below, you agree that your institution may release this information to NSF. Everyone recognizes that this information is personal and intends to use this information only in assessment of grants programs. You are under no obligation to provide this information; if you wish to withhold any of the information, please leave those lines blank. We thank you for your cooperation.
